

*Vietnam's Javan Rhino (Rhinoceros sondaicus) was first discovered in Cat Tien National Park in 1988. Not many people have seen this creature in the forest. Very few photos of this amazing species have been taken, this is one of these unique shots taken in April 1999.*

# Gone forever!

In May 2010, the decayed body of a Javan Rhino was discovered in Cat Tien National Park. Upon examination a bullet was found in its leg and its precious horn was missing. This was the last Javan Rhino in Vietnam; **this unique species is now extinct.**

**More than 450 different animal species are now threatened in Vietnam, many of which are facing extinction. Join Wildlife At Risk and help save Vietnam's unique wildlife before its too late.**

**Support the SOS travelling exhibition to say "NO" to illegal wildlife products!**
